SOAP Note

Patient: Patient | **Clinician:** Dr. Yuki Tanaka

Date: Sep 12, 2026 · 06:27 PM | **Encounter ID:** visit-e894cda1

Subjective

36yo male reports weeks of fatigue, excessive thirst, and frequent urination without other focal symptoms.

Objective

Not documented

Assessment

Classic presentation for diabetes mellitus requiring urgent lab confirmation.

Plan

Obtain fasting glucose, HbA1c, and urinalysis; prepare for possible diabetes management.

Differential Diagnosis Suggestions

Supportive suggestions only; requires clinician verification and approval.

1. Type 2 Diabetes Mellitus (82%)

Rationale: Classic triad of symptoms (polyuria, polydipsia, fatigue) strongly suggests diabetes mellitus.

2. Diabetes Insipidus (67%)

Rationale: Polyuria and polydipsia without clear metabolic signs may indicate diabetes insipidus.

3. Hypercalcemia (64%)

Rationale: Hypercalcemia can cause polyuria and fatigue due to nephrogenic DI effect.

4. Psychogenic Polydipsia (58%)

Rationale: Compulsive water drinking without underlying metabolic cause may explain symptoms.

5. Chronic Kidney Disease (49%)

Rationale: Fatigue can occur in CKD but lacks other classic symptoms (edema, nausea).
