Primary guideline: NICE CG150

Conversation History

doctor: Hi, Marcus. I am doctor Yuki Tanaka. It's nice to meet you. What brings you into the clinic today? Nice to meet you too. Honestly, I have been feeling incredibly tired the last few weeks, and I can't seem to drink enough water. I am always thirsty, which means I am running to the bathroom constantly.

Analysis and Insights

Key Points

- Patient reports fatigue, excessive thirst, and frequent urination for several weeks
- Classic symptoms suggestive of metabolic/endocrine disorder
- No additional symptoms or medical history reported

Action Items

- Order HbA1c and fasting glucose tests
- Consider basic metabolic panel and urinalysis
- Schedule follow-up to review test results

Patient Concerns

- Persistent fatigue
- Excessive thirst unrelieved by drinking
- Frequent urination disrupting daily life

Medical Terms

- Polydipsia (excessive thirst)
- Polyuria (excessive urination)
- Diabetes mellitus (chronic metabolic disorder)

Follow Up Questions

- Any recent weight changes?
- Family history of diabetes?
- Any blurred vision or numbness?
- How much water are you drinking daily?

Symptoms

- Fatigue
- Excessive thirst
- Frequent urination

Medications

• None documented.

Diagnosis Considerations

- Type 2 diabetes mellitus
- Primary polydipsia
- Hypercalcemia
- Chronic kidney disease

Risk Factors

- Symptoms persisting for weeks
- Classic diabetes symptom triad

Differential Diagnosis

• Diabetes Mellitus, Type 2 (82%)

Rationale: Classic triad of symptoms (fatigue, polydipsia, polyuria) strongly suggests Type 2 Diabetes without evidence of DKA.

• Primary Polydipsia (67%)

Rationale: Psychogenic or habitual fluid intake could explain symptoms without metabolic derangement.

• Hypercalcemia (64%)

Rationale: Calcium-induced nephrogenic DI may mimic diabetes symptoms.

• Chronic Kidney Disease (59%)

Rationale: Early CKD may present with fatigue and electrolyte-driven thirst.

• Thyrotoxicosis (50%)

Rationale: Less likely without tachycardia/weight loss, but fatigue warrants TSH check.
