SOAP Note

Patient: Patient | **Clinician:** Dr. Yuki Tanaka

Date: Sep 12, 2026 · 06:28 PM | **Encounter ID:** visit-f4c403b8

Subjective

43yo male reports 3 weeks of fatigue, excessive thirst, and frequent urination without other symptoms.

Objective

Not documented

Assessment

Classic symptoms of polyuria and polydipsia concerning for diabetes mellitus or other metabolic disorder.

Plan

Order initial diabetes workup including HbA1c, fasting glucose, and urinalysis. Schedule follow-up to review results.

Differential Diagnosis Suggestions

Supportive suggestions only; requires clinician verification and approval.

1. Diabetes Mellitus, Type 2 (82%)

Rationale: Classic triad of symptoms (fatigue, polydipsia, polyuria) strongly suggests Type 2 Diabetes without evidence of DKA.

2. Primary Polydipsia (67%)

Rationale: Psychogenic or habitual fluid intake could explain symptoms without metabolic derangement.

3. Hypercalcemia (64%)

Rationale: Calcium-induced nephrogenic DI may mimic diabetes symptoms.

4. Chronic Kidney Disease (59%)

Rationale: Early CKD may present with fatigue and electrolyte-driven thirst.

5. Thyrotoxicosis (50%)

Rationale: Less likely without tachycardia/weight loss, but fatigue warrants TSH check.
