SOAP Note

Patient: Patient | **Clinician:** Dr. Yuki Tanaka

Date: Sep 12, 2026 · 07:09 PM | **Encounter ID:** visit-4b56835d

Subjective

Patient reported elevated blood pressure readings at home, approximately 164/95 mmHg on two separate occasions.

Objective

Not documented

Assessment

Elevated blood pressure readings at home, consistent with Essential Hypertension (Stage 1) pending confirmation with ambulatory monitoring.

Plan

Confirm with ambulatory BP monitoring. Initiate ACE-inhibitor (e.g., Lisinopril 10mg) and lifestyle modifications per guidelines.

Differential Diagnosis Suggestions

Supportive suggestions only; requires clinician verification and approval.

1. Essential Hypertension (Stage 1) (70%)

Rationale: Persistent elevated BP readings (164/95 mmHg) meet Stage 1 criteria, with no secondary causes suggested.

2. White Coat Hypertension (55%)

Rationale: BP readings were taken at home, though limited data (only two occasions). Requires further confirmation.

3. Secondary Hypertension (Unspecified) (46%)

Rationale: Patient's elevated BP could indicate secondary causes, though no suggestive symptoms or history provided.

4. Tension-Type Headache (41%)

Rationale: No headache symptoms reported, included only due to BP association in guidelines.

5. Caffeine-Withdrawal Headache (38%)

Rationale: No caffeine-related symptoms reported, included only due to BP association.
