SOAP Note

Patient: Patient | **Clinician:** Dr. Yuki Tanaka

Date: Sep 28, 2026 · 10:54 PM | **Encounter ID:** visit-39cf72cf

Subjective

Patient reports blood pressure readings of approximately 160/95 mmHg on two different occasions and occasional mild headaches. Denies chest pain, shortness of breath, or dizziness. History of slightly high blood pressure during checkups but never diagnosed with hypertension.

Objective

Not documented

Assessment

Elevated blood pressure with occasional mild headaches, no other concerning symptoms reported. Possible Stage 1 hypertension.

Plan

Further evaluation needed for hypertension diagnosis and management, including ambulatory BP monitoring and lifestyle modifications.

Differential Diagnosis Suggestions

Supportive suggestions only; requires clinician verification and approval.

1. Essential Hypertension (Stage 1) (73%)

Rationale: Persistent elevated BP readings at home and history of high readings during checkups meet criteria for Stage 1 hypertension.

2. White-Coat Hypertension (65%)

Rationale: Elevated BP readings at home but no prior hypertension diagnosis; possible white-coat effect during checkups.

3. Tension-Type Headache (61%)

Rationale: Mild headaches reported, possibly related to elevated BP or stress, but no clear tension-type headache pattern described.

4. Secondary Hypertension (Renal) (53%)

Rationale: No clear evidence of secondary causes, but renal etiology should be considered if BP remains uncontrolled.

5. Caffeine-Withdrawal Headache (50%)

Rationale: Mild headaches could be related to caffeine withdrawal, but no history of caffeine use provided.
