SOAP Note

Patient: Patient | **Clinician:** Dr. Yuki Tanaka

Date: Sep 28, 2026 · 11:03 PM | **Encounter ID:** visit-333c9a6f

Subjective

Patient presents with home blood pressure readings of 160/95 mmHg on two occasions and occasional mild headaches. Denies chest pain, shortness of breath, or dizziness. History of slightly elevated BP in prior checkups but no prior hypertension diagnosis.

Objective

Not documented

Assessment

Elevated blood pressure readings consistent with Stage 1 hypertension criteria, requiring confirmation to rule out white-coat effect or secondary causes. Mild headaches may be related to hypertension or independent tension-type etiology.

Plan

Further evaluation needed for blood pressure management including ambulatory monitoring or clinic confirmation. Assessment of exercise habits and lifestyle factors to be completed.

Differential Diagnosis Suggestions

Supportive suggestions only; requires clinician verification and approval.

1. Essential Hypertension (Stage 1) (81%)

Rationale: Consistent elevated BP meets Stage 1 criteria, with corroborating history and typical mild symptoms.

2. White-Coat Hypertension (67%)

Rationale: Lack of prior diagnosis and isolated elevated readings raise possibility of measurement artifact.

3. Tension-Type Headache (55%)

Rationale: Headaches may be secondary to elevated BP or independent tension-type etiology.

4. Secondary Hypertension (Renal) (50%)

Rationale: Lack of prior diagnosis warrants secondary cause evaluation despite low pretest probability.

5. Caffeine-Withdrawal Headache (47%)

Rationale: Possible contributor if recent caffeine reduction, though less likely primary etiology.
