Primary guideline: NICE CG150

Conversation History

doctor: Good morning, Carmeletta. I'm doctor Norredin. So what brings you in to see me today? Ugh. Morning. Look. I just... I want to have a baby. Okay?

patient: And I don't want any trouble doing it. My sister, she had such a hard time, and I just... I don't want that. I'm not getting any younger. You know? I want to get this done quickly.

doctor: Right. Of course, it's good. You're planning ahead. Not wanting any trouble is vague, though. Let's try to be a bit more specific, shall we? Specific.

patient: What do you mean specific? I want to get pregnant easily without, you know, complications.

doctor: Is that not enough?

patient: Honestly, I don't have time to sit here listing every possible thing that could go wrong. It's just make it happen and make sure it's not a nightmare. Is that so hard to understand?

doctor: It's not that it's hard to understand, dear. It's that easily and without complications aren't medical terms. We need to figure out what could potentially cause complications for you. Have you been trying for a while? Trying?

patient: No. Not really. I... Well, my husband passed away a little over a year ago. I just... I remarried recently, and now we're thinking about it. That's why I'm here before it's too late. You understand?I don't want to spend years going through things. I just want a healthy baby. Is that too much to ask? Honestly, I don't even remember when my last period was, if that matters. Everything's been a blur.

doctor: Okay. I see. Recent remarriage and wanting to start a family, that certainly changes things, and it's good you're thinking ahead, especially given the recent loss. It's perfectly normal to feel anxious about this. Knowing when your last menstrual period was does matter quite a lot, actually. But since you don't recall, we'll need to do some basic tests. Have you had a general checkup recently?

patient: Tests? Look. I have private insurance, so I guess that's okay. But I really don't have time for a million different things. I had a checkup sometime after the wedding, I think. The new husband, he insisted. Insisted, it was all very thorough. But honestly, I don't remember what they even looked at. It was just a lot of poking and prodding. Are you going to poke and prod me now? I really don't like that.

doctor: Thorough is good, but we need specifics to ensure everything is optimal now. And, yes, a basic physical exam is necessary. It's not about poking and prodding. It's about gathering information. We'll check your blood pressure, weight, listen to your heart and lungs, standard things. It helps us establish a baseline. And it's important to know your medical history, allergies, any medications you're taking. Do you have any known allergies, or are you currently on any medications?

patient: All allergies.

doctor: Not really. I mean, I get a little sniffly sometimes with dust, but everyone does, right?

patient: Medications, let me think. Oh, I take a vitamin D supplement. The doctor after the wedding suggested that too. He said a lot of people are deficient and I sometimes take something for my sinuses when they act up. It's a decongestant, I think. Orange bottle. Honestly, I just grab whatever's on the shelf at the pharmacy. Is that important? I just want to get this done and over with. It's all so tedious.

doctor: It is important knowing exactly what you take and the dosage is crucial. Something for your sinuses and orange bottle aren't sufficient. It could interact with other medications or even affect fertility. Do you have the bottles with you?

patient: Ugh. Seriously? You want me to bring bottles to a doctor's appointment? That's ridiculous. No.

doctor: I don't have them with me. I told you. I just grab whatever's there. Look. I have a good immune system. Okay?

patient: I rarely get sick. I don't need a detailed inventory of every little thing I've ever taken. I just want you to tell me I'm healthy enough to have a baby and let me get on with my life. This is all so unnecessarily complicated and, frankly, a little insulting. Do you really think I'm that irresponsible? I'm a food science technician. You know? I understand hygiene and health.

doctor: Alright. While your profession is noted, it doesn't negate the need for a thorough medical evaluation. It's not about implying irresponsibility. It's about responsible health care. Given your reluctance to provide specifics in your recent loss, I'm going to recommend a comprehensive blood panel, including a complete fertility workup. We'll also need a pelvic exam and Pap smear. I understand this is tedious, but it's necessary to ensure a healthy pregnancy and a healthy baby. I'll also need a detailed family history on both sides. Do you have that readily available? Family history.

patient: Oh, for goodness sake. That's gonna take days to gather. My mother passed away years ago, and I barely knew my father and my husband's side. Well, it's complicated. Look. I came here for a quick assessment, not a genealogical research project. I really think you're overdoing it. Can't you just give me something to take or something, like a vitamin or something, and be done with it? I have things to do. You know? I really don't have time for all this fuss. I'm starting to think I should have just stayed home.

doctor: Unfortunately, I cannot provide treatment based on vague requests and incomplete information. While I understand your frustration, responsible medical care requires a thorough assessment. Given your resistance to providing necessary details and your expectation of a quick fix, I don't believe I'm the right physician to meet your needs. I'm happy to provide you with a referral to another practice. However, they will likely require the same information. Perhaps a consultation with a reproductive endocrinologist would be most suitable given your desire for a comprehensive fertility workup. Would you like me to provide that referral?

Analysis and Insights

Key Points

- Patient desires to conceive a baby without complications.
- Recently remarried, previous husband passed away over a year ago.
- Expresses anxiety about potential difficulties, citing her sister's struggles.
- Does not recall last menstrual period.
- Resistant to providing detailed medical history and undergoing standard evaluations.

Action Items

- Comprehensive blood panel including fertility workup.
- Pelvic exam and Pap smear.
- Referral to a reproductive endocrinologist.
- Patient education on the importance of preconception care.

Patient Concerns

- Desire to conceive quickly without complications.
- Frustration with the medical evaluation process.
- Anxiety about potential difficulties in conception.

Medical Terms

- Preconception counseling
- Fertility workup
- Reproductive endocrinologist
- Pelvic exam
- Pap smear

Follow Up Questions

- Can you recall any details about your last menstrual period?
- What specific medications (including dosage) are you currently taking?
- Can you provide any details about your family medical history?
- Have you experienced any symptoms that might affect fertility?

Symptoms

• None documented.

Medications

- Vitamin D supplement
- Decongestant (unspecified)

Diagnosis Considerations

- Preconception Counseling Needed
- Anxiety Disorder Related to Fertility Concerns
- Non-Adherence to Medical Recommendations
- Allergic Rhinitis
- Vitamin D Deficiency

Risk Factors

- Family history of conception difficulties (sister's struggles).
- Recent remarriage and desire to conceive quickly.
- Potential vitamin D deficiency.
- Mild dust allergy.

Differential Diagnosis

• Preconception Counseling Needed (82%)

Rationale: Patient presents with a desire to conceive and anxiety about potential complications, but is resistant to standard preconception evaluations.

• Anxiety Disorder Related to Fertility Concerns (76%)

Rationale: Patient exhibits anxiety and frustration related to fertility concerns, which may be impacting her willingness to engage in standard evaluations.

• Non-Adherence to Medical Recommendations (67%)

Rationale: Patient is resistant to providing necessary medical history and undergoing standard preconception evaluations.

• Allergic Rhinitis (59%)

Rationale: Patient reports mild sniffles related to dust allergy and is taking a decongestant.

• Vitamin D Deficiency (56%)

Rationale: Patient is taking a vitamin D supplement, which may indicate a previous diagnosis or concern for deficiency.
