SOAP Note

Patient: Patient | **Clinician:** Dr. Yuki Tanaka

Date: Oct 02, 2026 · 07:47 PM | **Encounter ID:** visit

Subjective

Patient presents with persistent elevated BP (on Lisinopril) and reports afternoon-onset moderate severity headaches. Notes discrepancy between clinic and home BP readings.

Objective

Not documented

Assessment

High confidence in Essential Hypertension (88%) with comorbid Tension-Type Headache (71%). White-Coat Hypertension and caffeine-related headache remain considerations.

Plan

Continue current antihypertensive, initiate BP monitoring protocol, headache diary, and evaluate caffeine intake patterns. Consider renal workup if BP remains refractory.

Differential Diagnosis Suggestions

Supportive suggestions only; requires clinician verification and approval.

1. Essential Hypertension (88%)

Rationale: Persistent elevated BP, on Lisinopril, strong pattern match.

2. Tension-Type Headache (71%)

Rationale: Afternoon onset, moderate severity, correlates with screen-time pattern.

3. White-Coat Hypertension (54%)

Rationale: Home readings infrequent; clinic readings consistently higher.

4. Caffeine-Withdrawal Headache (45%)

Rationale: Timing consistent. Caffeine history not yet confirmed.

5. Secondary Hypertension (renal) (22%)

Rationale: No renal workup documented. Rule out if BP control worsens.
